For the treatment of tardive dyskinesia (TD) in adults

Do you have

unintentional, uncontrollable movements

in your face, hands, feet, or torso?

It could be tardive dyskinesia (TD).

AUSTEDO® is a prescription medicine that is used to treat adults with movements in the face, tongue, or other body parts that cannot be controlled (tardive dyskinesia).

IMPORTANT SAFETY INFORMATION

AUSTEDO® can cause serious side effects in people with Huntington’s disease, including: depression, suicidal thoughts, or suicidal actions. Do not start taking AUSTEDO® if you are depressed (have untreated depression or depression that is not well controlled by medicine) or have suicidal thoughts. Pay close attention to any changes, especially sudden changes, in mood, behaviors, thoughts or feelings. This is especially important when AUSTEDO® is started and when the dose is changed. Call your healthcare provider right away if you become depressed, have unusual changes in mood or behavior, or have thoughts of suicide.

Please read Important Safety Information on pages 10 – 11 and the accompanying Medication Guide.
What is tardive dyskinesia (TD)?

TD appears as mild to severe twitching, shaking, or jerking in the hands, feet, face, or torso. TD is associated with certain prescription medications used to treat mental health or gastrointestinal conditions.

Do you have any of the following?

- Involuntary blinking, tongue movements, and other unintentional, uncontrollable movements in your face, hands, feet, or torso
- Difficulty reading or writing
- Trouble speaking, or being understood by others
- A hard time cutting your food or holding your drink

If you answered “yes” to any of these questions, you may want to ask your doctor to evaluate you for TD.

1 IN 4 people taking certain mental health medications may develop TD.

Long-term use of some medications to treat schizophrenia, bipolar disorder, depression, and some other conditions can lead to TD.
Whether they are mild to severe, the unintentional, uncontrollable movements of TD can impact a person both physically and functionally.

TD can make activities like walking, writing, eating, speaking, or swallowing difficult.

TD affects everyone differently. The severity of TD symptoms can vary from person to person, but even mild symptoms can be bothersome.

With TD, it’s personal. Everyone’s needs and treatment goals can be different.

The first steps in managing TD are recognizing the signs and discussing them with your doctor.
Tell your doctor about all of your medical conditions and all of the medicines you take, including prescription and over-the-counter medications, vitamins, and herbal supplements.

IMPORTANT SAFETY INFORMATION

Do not take AUSTEDO® if you:
• have Huntington’s disease and are depressed or have thoughts of suicide.
• have liver problems.
• are taking a monoamine oxidase inhibitor (MAOI) medicine. Do not take an MAOI within 14 days after you stop taking AUSTEDO®. Do not start AUSTEDO® if you stopped taking an MAOI in the last 14 days. Ask your healthcare provider or pharmacist if you are not sure.
• are taking reserpine. Do not take medicines that contain reserpine (such as Serpalan® and Renese®-R) with AUSTEDO®. If your healthcare provider plans to switch you from taking reserpine to AUSTEDO®, you must wait at least 20 days after your last dose of reserpine before you start taking AUSTEDO®.
• are taking tetrabenazine (Xenazine®). If your healthcare provider plans to switch you from tetrabenazine (Xenazine®) to AUSTEDO®, take your first dose of AUSTEDO® on the day after your last dose of tetrabenazine (Xenazine®).
• are taking valbenazine (Ingrezza®).

In clinical studies, adults with TD were able to continue with their mental health medications like antipsychotics or antidepressants while taking AUSTEDO®.
In 2 clinical studies, a total of 335 people with TD were studied for 12 weeks.

A total of 220 people took AUSTEDO® and a total of 115 people took placebo.

The primary goal of both studies was to identify the change in involuntary movements — as measured by the *Abnormal Involuntary Movement Scale (AIMS)* total score — from the beginning to the end of the 12-week studies. The AIMS total score was used to measure the uncontrollable movements of TD.

The AIMS score is calculated by adding scores from all of the following individual areas of the body: the face including mouth, jaw, and tongue; arms including wrists, hands, and fingers; trunk including hips, neck, and shoulders; and legs including knees, feet, and toes.

- **AIMS** uses a checklist to assess the severity of involuntary movements and can also be used to track changes in the movements over time.
- The test rates movements over 7 areas of the body, scoring severity of involuntary movements in each area from 0–4; with 0 = no movements and 4 = severe movements.
AUSTEDO® (deutetrabenazine) tablets reduced the involuntary, repetitive movements of TD in clinical studies.

**Clinical study results**

**Study 1**
Involuntary Movement Reduction at Week 12

**In Study 1,** AUSTEDO® reduced the AIMS total score by **3.3 points vs 1.4 points** with placebo from the start of the study

- For participants taking AUSTEDO®, this represents a 33% reduction in AIMS total score vs a 12% reduction for those taking placebo
- Improvement in uncontrolled movements began to be seen at 2 weeks

A reduction in AIMS total score means reduced involuntary movements.

**IMPORTANT SAFETY INFORMATION**

Other possible serious side effects include:

- **Irregular heartbeat (QT prolongation).** AUSTEDO® increases your chance of having certain changes in the electrical activity in your heart. These changes can lead to a dangerous abnormal heartbeat. Taking AUSTEDO® with certain medicines may increase this chance. If you are at risk of QT prolongation, your healthcare provider should check your heart before and after increasing your AUSTEDO® dose above 24 mg a day.
Study 2
Involuntary Movement Reduction at Week 12

In Study 2, AUSTEDO® (deutetrabenazine) tablets reduced the AIMS total score by 3.0 points vs 1.6 points with placebo from the start of the study.

- For participants taking AUSTEDO®, this represents an approximately 27% reduction in AIMS total score vs a 16% reduction for those taking placebo.

A reduction in AIMS total score means reduced involuntary movements.

IMPORTANT SAFETY INFORMATION
Other possible serious side effects include:
- **Neuroleptic Malignant Syndrome.** Call your healthcare provider right away and go to the nearest emergency room if you develop these signs and symptoms that do not have another obvious cause: high fever, stiff muscles, problems thinking, very fast or uneven heartbeat, or increased sweating.
- **Restlessness.** You may get a condition where you feel a strong urge to move. This is called akathisia.
- **Parkinsonism.** Symptoms include: slight shaking, body stiffness, trouble moving, trouble keeping your balance, or falls.

Please read Important Safety Information on pages 10—11 and the accompanying Medication Guide.
Side effects from clinical studies of AUSTEDO® (deutetrabenazine) tablets

In 2 clinical studies for TD, the most common side effects of AUSTEDO® included:
- Inflammation of the nose and throat (nasopharyngitis)
- Problems sleeping (insomnia)

4% of people taking AUSTEDO® had to have their dose lowered due to side effects vs 2% taking placebo

Other side effects of AUSTEDO® in the clinical studies included:
- Depression
- Restlessness
- Agitation
- A strong urge to move (akathisia)

IMPORTANT SAFETY INFORMATION

Sleepiness (sedation) is a common side effect of AUSTEDO®. While taking AUSTEDO®, do not drive a car or operate dangerous machinery until you know how AUSTEDO® affects you. Drinking alcohol and taking other drugs that may also cause sleepiness while you are taking AUSTEDO® may increase any sleepiness caused by AUSTEDO®.

The most common side effects of AUSTEDO® in people with Huntington’s disease include sleepiness (sedation), diarrhea, tiredness, and dry mouth.

Please read Important Safety Information on pages 10–11 and the accompanying Medication Guide.
AUSTEDO® (deutetrabenazine) tablets dosing is personalized, so you can work with your doctor to find the dose that’s right for you.

Your doctor may increase your dose of AUSTEDO® each week for several weeks to find the dose that is appropriate for you. This process is known as titration.

AUSTEDO® tablets are available in 3 strengths. Your daily dose may require a combination of tablet strengths.

- It’s important to take AUSTEDO® exactly as your doctor tells you to take it.
- Take AUSTEDO® with food. Swallow AUSTEDO® tablets whole with water. Do not chew, crush, or break AUSTEDO® tablets before swallowing. If you cannot swallow AUSTEDO® tablets whole, tell your healthcare provider. You may need a different medicine.
APPROVED USES

AUSTEDO® (deutetrabenazine) tablets is a prescription medicine that is used to treat:

- the involuntary movements (chorea) of Huntington’s disease. AUSTEDO® does not cure the cause of the involuntary movements, and it does not treat other symptoms of Huntington’s disease, such as problems with thinking or emotions.
- movements in the face, tongue, or other body parts that cannot be controlled (tardive dyskinesia).

It is not known if AUSTEDO® is safe and effective in children.

IMPORTANT SAFETY INFORMATION

AUSTEDO® can cause serious side effects in people with Huntington’s disease, including: depression, suicidal thoughts, or suicidal actions. Do not start taking AUSTEDO® if you are depressed (have untreated depression or depression that is not well controlled by medicine) or have suicidal thoughts. Pay close attention to any changes, especially sudden changes, in mood, behaviors, thoughts or feelings. This is especially important when AUSTEDO® is started and when the dose is changed. Call your healthcare provider right away if you become depressed, have unusual changes in mood or behavior, or have thoughts of suicide.

Do not take AUSTEDO® if you:

- have Huntington’s disease and are depressed or have thoughts of suicide.
- have liver problems.
- are taking a monoamine oxidase inhibitor (MAOI) medicine. Do not take an MAOI within 14 days after you stop taking AUSTEDO®. Do not start AUSTEDO® if you stopped taking an MAOI in the last 14 days. Ask your healthcare provider or pharmacist if you are not sure.
- are taking reserpine. Do not take medicines that contain reserpine (such as Serpalan® and Renese®-R) with AUSTEDO®. If your healthcare provider plans to switch you from taking reserpine to AUSTEDO®, you must wait at least 20 days after your last dose of reserpine before you start taking AUSTEDO®.
- are taking tetrabenazine (Xenazine®). If your healthcare provider plans to switch you from tetrabenazine (Xenazine®) to AUSTEDO®, take your first dose of AUSTEDO® on the day after your last dose of tetrabenazine (Xenazine®).
- are taking valbenazine (Ingrezza®).
IMPORTANT SAFETY INFORMATION (CONTINUED)

Other possible serious side effects include:

• **Irregular heartbeat (QT prolongation).** AUSTEDO® (deutetrabenazine) tablets increases your chance of having certain changes in the electrical activity in your heart. These changes can lead to a dangerous abnormal heartbeat. Taking AUSTEDO® with certain medicines may increase this chance. If you are at risk of QT prolongation, your healthcare provider should check your heart before and after increasing your AUSTEDO® dose above 24 mg a day.

• **Neuroleptic Malignant Syndrome.** Call your healthcare provider right away and go to the nearest emergency room if you develop these signs and symptoms that do not have another obvious cause: high fever, stiff muscles, problems thinking, very fast or uneven heartbeat, or increased sweating.

• **Restlessness.** You may get a condition where you feel a strong urge to move. This is called akathisia.

• **Parkinsonism.** Symptoms include: slight shaking, body stiffness, trouble moving, trouble keeping your balance, or falls.

**Sleepiness (sedation) is a common side effect of AUSTEDO®.** While taking AUSTEDO®, do not drive a car or operate dangerous machinery until you know how AUSTEDO® affects you. Drinking alcohol and taking other drugs that may also cause sleepiness while you are taking AUSTEDO® may increase any sleepiness caused by AUSTEDO®.

The most common side effects of AUSTEDO® in people with Huntington’s disease include sleepiness (sedation), diarrhea, tiredness, and dry mouth.

The most common side effects of AUSTEDO® in people with tardive dyskinesia include inflammation of the nose and throat (nasopharyngitis) and problems sleeping (insomnia).

These are not all the possible side effects of AUSTEDO®. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

Please read the accompanying Medication Guide.
Teva’s Shared Solutions® is committed to helping you find affordable access to AUSTEDO® (deutetrabenazine) tablets so you can start and stay on treatment as prescribed by your doctor.

Financial assistance programs from Teva’s Shared Solutions®

Our team of dedicated benefits specialists are committed to helping you gain access to AUSTEDO® as soon as possible. We offer:

✔ Financial assistance eligibility determination

The AUSTEDO® Copay Program

As little as $0 Copay

per month, for eligible commercially insured patients

Please note this offer is not available for patients eligible for Medicare, Medicaid or any other government payer coverage.*

✔ Assistance with navigating Medicare Part D

✔ Additional financial assistance programs may exist, depending on your insurance coverage and if you meet certain eligibility requirements

*Terms and Conditions for the AUSTEDO® Copay Program: The AUSTEDO® Copay Program is available to eligible patients who have been prescribed AUSTEDO® and have commercial insurance. Eligible patients may pay as little as $0 on each fill. Maximum annual benefits apply and out-of-pocket expenses may vary. Patient is responsible for costs above maximum benefit amounts. This Program is restricted to residents of the United States and United States territories. Uninsured and cash-paying patients are NOT eligible for this Program, nor are patients with commercial insurance that does not provide coverage for AUSTEDO® (except in certain limited situations while a prior authorization is pending). Patients enrolled in any state or federally funded healthcare program, including but not limited to, Medicare, Medigap, Medicaid, VA, DOD, TRICARE, Puerto Rico Government Health Insurance Plan, Medicare-eligible patients enrolled in an employer-sponsored health plan or prescription drug benefit program for retirees, are NOT eligible for this Program. Teva Pharmaceuticals USA, Inc. and its affiliates reserve the right to change, rescind, revoke, or discontinue this Program at any time without notice. Please see complete Terms and Conditions at www.AUSTEDO.com.
Nurse support

Teva’s Shared Solutions® is dedicated to providing support throughout your AUSTEDO® (deutetrabenazine) tablets treatment by offering:

- Teva’s Shared Solutions® nurse phone support
  - Our trained nurses are available by phone, so you will have someone to talk to about your AUSTEDO® treatment
  - Communication through email, mail, or phone to help support you throughout your AUSTEDO® treatment

Our team is just one call away. Call Shared Solutions® at 1-800-887-8100.
Imagine a Treatment for TD

Treats the unintentional, uncontrollable movements of tardive dyskinesia (TD)

May help manage TD while you continue with mental health medications like antipsychotics or antidepressants

Dosing is personalized, so you and your doctor can work together to find the dose that’s right for you

With AUSTEDO®, you can receive support from Teva’s Shared Solutions® throughout your treatment

Read the Medication Guide on the following pages for more information about AUSTEDO®, including possible side effects.

What is the most important information I should know about AUSTEDO?

• AUSTEDO can cause serious side effects in people with Huntington's disease, including:
  ◦ depression
  ◦ suicidal thoughts
  ◦ suicidal actions
• Do not start taking AUSTEDO if you have Huntington’s disease and are depressed (have untreated depression or depression that is not well controlled by medicine) or have suicidal thoughts.
• Pay close attention to any changes, especially sudden changes, in mood, behaviors, thoughts, or feelings. This is especially important when AUSTEDO is started and when the dose is changed.

Call your healthcare provider right away if you become depressed or have any of the following symptoms, especially if they are new, worse, or worry you:
• feel sad or have crying spells
• lose interest in seeing your friends or doing things you used to enjoy
• sleep a lot more or a lot less than usual
• feel unimportant
• feel guilty
• feel hopeless or helpless
• feel more irritable, angry, or aggressive than usual
• feel more or less hungry than usual or notice a big change in your body weight
• have trouble paying attention
• feel tired or sleepy all the time
• have thoughts about hurting yourself or ending your life

What is AUSTEDO?

AUSTEDO is a prescription medicine that is used to treat:
• the involuntary movements (chorea) of Huntington’s disease. AUSTEDO does not cure the cause of the involuntary movements, and it does not treat other symptoms of Huntington’s disease, such as problems with thinking or emotions.
• movements in the face, tongue, or other body parts that cannot be controlled (tardive dyskinesia).
It is not known if AUSTEDO is safe and effective in children.

Who should not take AUSTEDO?

Do not take AUSTEDO if you:
• have Huntington's disease and are depressed or have thoughts of suicide. See “What is the most important information I should know about AUSTEDO?”
• have liver problems.
• are taking a monoamine oxidase inhibitor (MAOI) medicine. Do not take an MAOI within 14 days after you stop taking AUSTEDO. Do not start AUSTEDO if you stopped taking an MAOI in the last 14 days. Ask your healthcare provider or pharmacist if you are not sure.
• are taking reserpine. Do not take medicines that contain reserpine (such as Serpalan and Renese-R) with AUSTEDO. If your healthcare provider plans to switch you from taking reserpine to AUSTEDO, you must wait at least 20 days after your last dose of reserpine before you start taking AUSTEDO.
• are taking tetrabenazine (Xenazine). If your healthcare provider plans to switch you from tetrabenazine (Xenazine) to AUSTEDO, take your first dose of AUSTEDO on the day after your last dose of tetrabenazine (Xenazine).
• are taking valbenazine (Ingrezza).

Before taking AUSTEDO, tell your healthcare provider about all of your medical conditions, including if you:
• have emotional or mental problems (for example, depression, nervousness, anxiety, anger, agitation, psychosis, previous suicidal thoughts or suicide attempts).
• have liver disease.
• have an irregular heart rhythm or heartbeat (QT prolongation, cardiac arrhythmia) or a heart problem called congenital long QT syndrome.
• have low levels of potassium or magnesium in your blood (hypokalemia or hypomagnesemia).
• have breast cancer or a history of breast cancer.
• are pregnant or plan to become pregnant. It is not known if AUSTEDO can harm your unborn baby.
• are breastfeeding or plan to breastfeed. It is not known if AUSTEDO passes into breast milk.

Tell your healthcare provider about all of the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements.

Taking AUSTEDO with certain other medicines may cause side effects. Do not start any new medicines while taking AUSTEDO without talking to your healthcare provider first.
How should I take AUSTEDO?

• Take AUSTEDO exactly as your healthcare provider tells you to take it.
• Take AUSTEDO by mouth and with food.
• Swallow AUSTEDO tablets whole with water. Do not chew, crush, or break AUSTEDO tablets before swallowing. If you cannot swallow AUSTEDO tablets whole, tell your healthcare provider. You may need a different medicine.
• If your dose of AUSTEDO is 12 mg or more each day, take AUSTEDO tablets 2 times a day in equal doses with food.
• Your healthcare provider will increase your dose of AUSTEDO each week for several weeks, until you and your healthcare provider find the right dose for you.
• Tell your healthcare provider if you stop taking AUSTEDO for more than 1 week. Do not take another dose until you talk to your healthcare provider.

What should I avoid while taking AUSTEDO?

Sleepiness (sedation) is a common side effect of AUSTEDO. While taking AUSTEDO, do not drive a car or operate dangerous machinery until you know how AUSTEDO affects you. Drinking alcohol and taking other drugs that may also cause sleepiness while you are taking AUSTEDO may increase any sleepiness caused by AUSTEDO.

What are the possible side effects of AUSTEDO?

AUSTEDO can cause serious side effects, including:
• Depression and suicidal thoughts or actions in people with Huntington’s disease. See “What is the most important information I should know about AUSTEDO?”
• Irregular heartbeat (QT prolongation). AUSTEDO increases your chance of having certain changes in the electrical activity in your heart. These changes can lead to a dangerous abnormal heartbeat. Taking AUSTEDO with certain medicines may increase this chance.
  ◦ If you are at risk of QT prolongation, your healthcare provider should check your heart before and after increasing your AUSTEDO dose above 24 mg a day.
• Neuroleptic Malignant Syndrome (NMS). Call your healthcare provider right away and go to the nearest emergency room if you develop these signs and symptoms that do not have another obvious cause:
  ◦ high fever
  ◦ problems thinking
  ◦ increased sweating
  ◦ stiff muscles
  ◦ very fast or uneven heartbeat
• Restlessness. You may get a condition where you feel a strong urge to move. This is called akathisia.
• Parkinsonism. Symptoms of parkinsonism include: slight shaking, body stiffness, trouble moving, trouble keeping your balance, or falls.

The most common side effects of AUSTEDO in people with Huntington’s disease include:
• sleepiness (sedation)
• diarrhea
• tiredness
• dry mouth

The most common side effects of AUSTEDO in people with tardive dyskinesia include:
• inflammation of the nose and throat (nasopharyngitis)
• problems sleeping (insomnia)

These are not all the possible side effects of AUSTEDO. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

How should I store AUSTEDO?

• Store AUSTEDO tablets at room temperature, between 68°F to 77°F (20°C to 25°C).
• Keep the bottle tightly closed to protect AUSTEDO from light and moisture.

Keep AUSTEDO tablets and all medications out of reach of children.

General information about the safe and effective use of AUSTEDO.

Medicines are sometimes prescribed for purposes other than those listed in a Medication Guide. Do not use AUSTEDO for a condition for which it was not prescribed. Do not give AUSTEDO to other people, even if they have the same symptoms you have. It may harm them. You can ask your pharmacist or healthcare provider for information about AUSTEDO that is written for health professionals.

What are the ingredients in AUSTEDO?

Active ingredient: deutetrabenazine

Inactive ingredients: ammonium hydroxide, black iron oxide, n-butyl alcohol, butylated hydroxyanisole, butylated hydroxytoluene, magnesium stearate, mannitol, microcrystalline cellulose, polyethylene glycol, polyethylene oxide, polysorbate 80, polyvinyl alcohol, povidone, propylene glycol, shellac, talc, titanium dioxide, and FD&C blue #2 lake. The 6 mg tablets also contain FD&C red #40 lake. The 12 mg tablets also contain FD&C yellow #6 lake.
